

Exam Information

February 14th 2023 11:30-13:00 in [101, Hörsaal 1, "Interims I" \(5620.01.101\)](#), [MW 1801, Ernst-Schmidt-Hörsaal \(5508.02.801\)](#), [003, Hörsaal 2, "Interims II" \(5416.01.003\)](#) (room allocation will be published soon)

- Style:
 - Written exam
 - Mixture of questions (of style multiple-choice & „free-text“) and calculation tasks (~ 50/50)
- Aids:
 - Except from a pen, ruler and calculator (not programmable) no other aids are allowed!
 - A dictionary may be used.

Exam Information

- Other hints:
 - List with **equations to be known by heart** is available on Moodle
 - Unit conversion factors will be given
 - You can answer in English **or** in German
 - Give numeric values with **four significant digits (123400, 0.01234)**.
 - ➔ for wrong roundings -0.5P will be given
 - ➔ for missing units -0.5P will be given
 - In most of the calculation tasks “back-up” values will be given (there are **no** minus points if you use the back-up value) Also, points for subsequent errors (dt.: Folgefehler) will also be given

Exam Information

Calculation tasks: Always provide a comprehensive derivation of the solution. Also, if not asked otherwise, put the final solution in solution box beneath the task!

Example

Solution boxes:

a) $AR = 9.901$ ✓	correct answer + derivation, full points
b) $\lambda = 0.2549$ ✗	incorrect answer (due to typo in calculator), but in additional box equation given – points on equation
c) $\Lambda_{25\%} = 22.12^\circ$ ✗	correct answer, but no derivation in additional box equation – no points

Additional boxes:

a) $AR = \frac{b^2}{S_{ref}} = \frac{44.5^2}{200}$ ✓	Here, a comprehensive derivation of the solution is required (e.g. equations etc.)
b) $\lambda = \frac{c_{tip}}{c_{root}} = \frac{1.5}{6.1}$ ✓	
c) ? ✗
